# LEADERS IN QUALITY

Western's quality sets the standard and our sister company, GlobalPointe, is part of that recipe of success. Learn what sets our stile and rail offering apart.

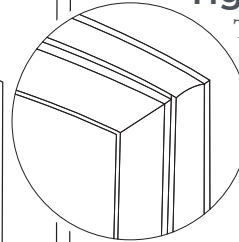

## Thicker Veneers

We utilize thicker veneers on our doors exceeding the industry standard. Why? They allow for a more forgiving working surface when sanding and finishing. Additionally, we color match each veneer for consistency in grain and tone. The end result is a beautifully finished door you can take pride in.

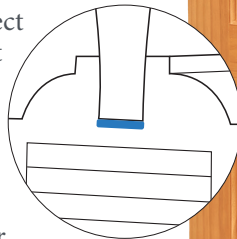

## Tighter Coped Joints

The decorative edge of each stile and rail that meets the panel is called the "sticking profile." Our copes join together exceptionally well resulting in a crisp appearance you simply won't find anywhere else.

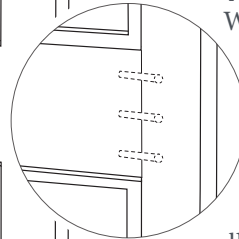

## Rattle-Free Floating Panels

Another innovative aspect of our doors is a gasket that mitigates expansion and contraction. This makes the panel less prone to reveal unstained wood upon any shrinkage in the winter. It also prevents "panel rattle."

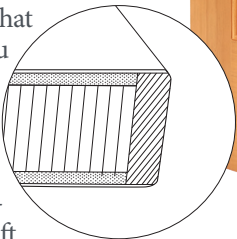

## Superior Construction

Wood dowels are used at all intersections of stiles and rails to help eliminate joint separation. Much of the competition will use fewer, smaller dowel pins to cut costs. We believe it's a small price to pay for a product that'll stand the test of time.

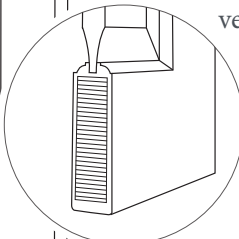

## Thicker Solid Wood Edge Bands

Solid wood edge bands that are 3/8" thick allow you to trim the door down to get just the right fit. Additionally, 2mm hard-board cross bands are used ensuring a smooth surface to prevent veneer lift.

## Highest Quality Cores

Our doors feature LVL (laminated veneer lumber) cores in the stiles and rails creating a stronger, more stable product that resists warping. LVL outperforms wood stave cores which have a tendency to deflect.

# LEVANTE™ SERIES

Roughly translating to *elevate* or to *raise*, Levante™ captures the essence of our new line of raised panel stile and rail doors. Crisp panel detail, engineered LVL stiles for performance and EasyPrep primer truly set it apart from the alternatives. It offers the panel designs people want – ready to paint. You won't find this door anywhere else, much less at such an unbeatable value.

# PREFINISHING

## Our Prefinishing Service

We're proud to offer an expansive, colorful palette of stock and custom stains to suit every decorative style and taste.

We utilize durable, water based top coats to ensure a finish that is attractive and environmentally friendly.

Using both hand-wiped and spray on processes, our prefinishing capabilities yield an even application and rich appearance.

## When Field Finishing

Protect your door from soiling, damage and moisture prior to finishing.

Lightly sand all surfaces of the door (180 grit or finer) with the grain to avoid scratches.

Clean your door thoroughly after sanding to remove all dust.

Wood is a natural product and different species will accept finishes differently. Additionally, a barber pole effect, between veneers, is natural and stain may appear to vary to some degree.

Apply a compatible finish, according to its instructions, before final hanging.

Make sure all surfaces, including edges are sealed/finished.

Allow for enough dry time according to your stains instructions.

Be careful not to scratch the glass when removing protective film after finishing French doors.
